

## Description of Tape:

The dust tape is made by the permeable and breathable foam in the past, so users usually encounter the problem of non-waterproof when they are doing the mechanical design with surface acoustic wave touch panel. Gtouch will provide the high-quality PE waterproof tapes come by its surface acoustic wave touch panels from 2014. After testing the PE waterproof tape with the mechanical design, we are sure the customers' end-products can easily achieve the effect of IP-54. Gtouch offers two tapes - waterproof and dust for customers shipping options to achieve a wide range of selectivity in a variety of customer needs.

### Main Difference:

**Dust Tape:** Easily reach IP-43, and the mechanical design is simple.

**Waterproof Tape:** It can reach IP-54 with the customer's mechanical design. The requirements of mechanical design is slightly more complicated. (ps/ The surface acoustic wave touch panel can't achieve functional waterproof, only can reach body waterproof in the maximum.)
